Tana invites visitors to Feel the Energy at IFAT 2026

Tana is set to make a powerful impact at [IFAT 2026](#), inviting visitors to Feel the Energy through a live showcase of high-performance machines, new developments, and next-generation digital solutions.

At this year's exhibition, visitors can discover Tana's latest innovations in waste processing, bringing together performance and intelligent technology demonstrating how efficiency and operational excellence go hand in hand.

A Must-See Highlight: The TANA Hammerhead

Visitors will have the opportunity to experience the TANA Hammerhead, a mobile shredder designed to deliver unmatched power and performance in demanding waste processing environments. Built to maximize uptime and productivity, the Hammerhead reflects Tana's commitment to pushing the boundaries of performance.

Exclusive Product Launch – Day One

Tana will unveil an exciting new product on the very first day of the exhibition. This highly anticipated launch represents a significant step forward in waste management technology, combining innovative engineering with real-world operational benefits. Visitors will be among the first to witness this breakthrough solution.

Live Demonstrations

IFAT visitors will have the opportunity to see the TANA Shark shredder in action during live demonstrations at the German distributor, VENETO Schwenter GmbH, stand (FS.911/1), daily at 10:30, 12:00, 14:30, and 16:00.

Introducing Tana Wingman

Experience Tana Wingman live - a digital operator assistant designed to improve visibility, safety, and efficiency for TANA shredders.

Wingman delivers real-time machine data and a live hopper camera view directly to a tablet interface at the machine. Designed for on-site use, it operates without cloud services or internet connectivity, ensuring reliable performance while keeping all data securely on site.

The system enhances situational awareness during loading and feeding, helping operators respond more quickly to changing conditions such as blockages or irregular material flow. All essential information is available directly on the loading machine, reducing the need to leave the operating area.

Look into the Future with TanaConnect Smart Assistant

At IFAT 2026, Tana is piloting a next-generation, AI-driven proof of concept for heavy machinery in collaboration with spogen.ai.

The TanaConnect Smart Assistant introduces the potential for hands-free, voice-enabled interaction that integrates seamlessly into daily operator and service workflows. Within the TanaConnect® environment, it provides intuitive, context-aware access to machine-specific content, reducing time spent searching manuals and supporting daily work and troubleshooting.

Join Us and Feel the Energy

The Tana stand will be more than a place to view products; it will be an interactive space where visitors can speak with experts and see how Tana solutions can make a real difference in day-to-day operations. From higher productivity to more efficient workflows, there will be plenty to explore, learn, and experience.

Tana warmly welcomes all IFAT 2026 attendees to visit **Stand 227 in Hall B5** and feel the energy firsthand. From powerful machines to intelligent services, this is an opportunity to explore the future of waste management technology in an engaging and inspiring environment.

55 years of commitment – no time to waste
