Tana Factory Rebuild

TANA FROM WASTE TO VALUE®

Foreword

At Tana, we believe in listening to our customers' needs and providing solutions that deliver real value. Our Second Life Rebuild programme is a practical demonstration of this philosophy.

By restoring used machines to meet strict quality standards, we enable our distributors to offer rebuilt equipment as part of a comprehensive product lineup, supporting both machine and spare parts sales. This approach not only extends the life of machines but also embraces sustainability by focusing on reuse.

With each rebuild, we are laying the groundwork for the future, refining our processes to meet evolving demands while ensuring that every customer receives a fully functional machine tailored to their priorities—whether that means focusing on performance or optimizing costs.

Sustainability

Rebuilds extend machine life, reducing waste and supporting eco-friendly practices by reusing valuable resources.

Cost-effectiveness

Rebuilt machines offer top performance at a fraction of the cost of new equipment, saving on unnecessary expenses.

Customization

Rebuilds can be tailored to specific needs, providing a functional, efficient machine that fits both operational goals and budget.
